

## **vhf Exhibition Programme at Euromold:**

### **CNC Milling Systems for Mould Making**

**The company vhf camufacture AG presents of its three most popular CNC machining systems one exemplar each at the Euromold. Besides the compact and approved Classic series, the high-grade robust Premium series might be, above all, the most interesting system in the sector of mould making.**

Both of the mentioned systems feature very high precision and high machining speed. However, due to its construction the Premium series is predestined for tough industrial usage and offers several additional equipment alternatives. Using, for example, an optional front clamping range, also long workpieces can be processed from several sides.

The upper ending of the size spectrum is completed by the Active Pro series. With a positioning range of up to 2 x 4 meters it is in the position to also process very large workpieces quickly and efficiently. The standardly integrated vacuum table enables a quick and easy exchange of workpieces.

In addition, the range of vhf tools is presented at the fair. It consists of numerous carbide and diamond tools for engraving, milling, drilling, chamfering, thread cutting, polishing and more.
